

ABSTRACT

SIMPLEV Version 1.0 was improved to include hybrid vehicle simulations. This electric/series hybrid vehicle simulation code can be used with any IBM compatible personal computer and is useful for performing parametric studies of electric/hybrid vehicle performance on user input driving cycles. The program is run interactively and guides the user through all of the necessary inputs. Driveline components and the traction battery are described and defined by ASCII files which may be customized by the user. Scaling of these components is also possible. Detailed simulation results are plotted on the PC monitor and may also be output to a printer or ASCII text files. This report serves as a users' manual and documents the mathematical relationships used in the simulation.

CONTENTS

Abstract	iii
Acronyms	ix
Introduction	1
Errors Corrected	2
Function and Control Keys	2
Wheel Slip/Skid	3
Maximum Motor Torque During Regenerative Braking	3
Auxiliary Power Unit	3
User-written Files	4
Calculated Results	4
Output Devices	4
Time Axis	4
Execution Delay	4
General Description	5
Simulation Methodology	5
Program Termination	6
Report Organization	7
Executing SIMPLEV	7
SIMPLEV Computer Files	7
Hardware Requirements	9
Starting SIMPLEV	9
Input Screen	10
SIMPLEV Output	39
Troubleshooting	50
Compiler Error Messages	52
Program Description	55
Description of Operation	55
Vehicle/Powertrain Configuration	55
Road Load Power	55
